1. Sensor compatibility

This document relates which sensors of the Waspote platform are connected on each socket of the sensors boards, as long as the special circumstances of each of them.

In next sections all the boards are described separately, enumerating the sensors of the board.

Temperature Socket

1. Temperature

Reference Socket

1. Single Junction Reference Probe
2. Double Junction Reference Probe

- One (and only one) Reference Probe must always be connected in the Reference Socket.
- Sensors in Sockets 1, 2, 3 and 4 must always be of the same type than the Reference Probe (Single/Probe)

***Microphone sensor is calibrated on demand**

Restrictions and special considerations for this board are described below:

- No restrictions.

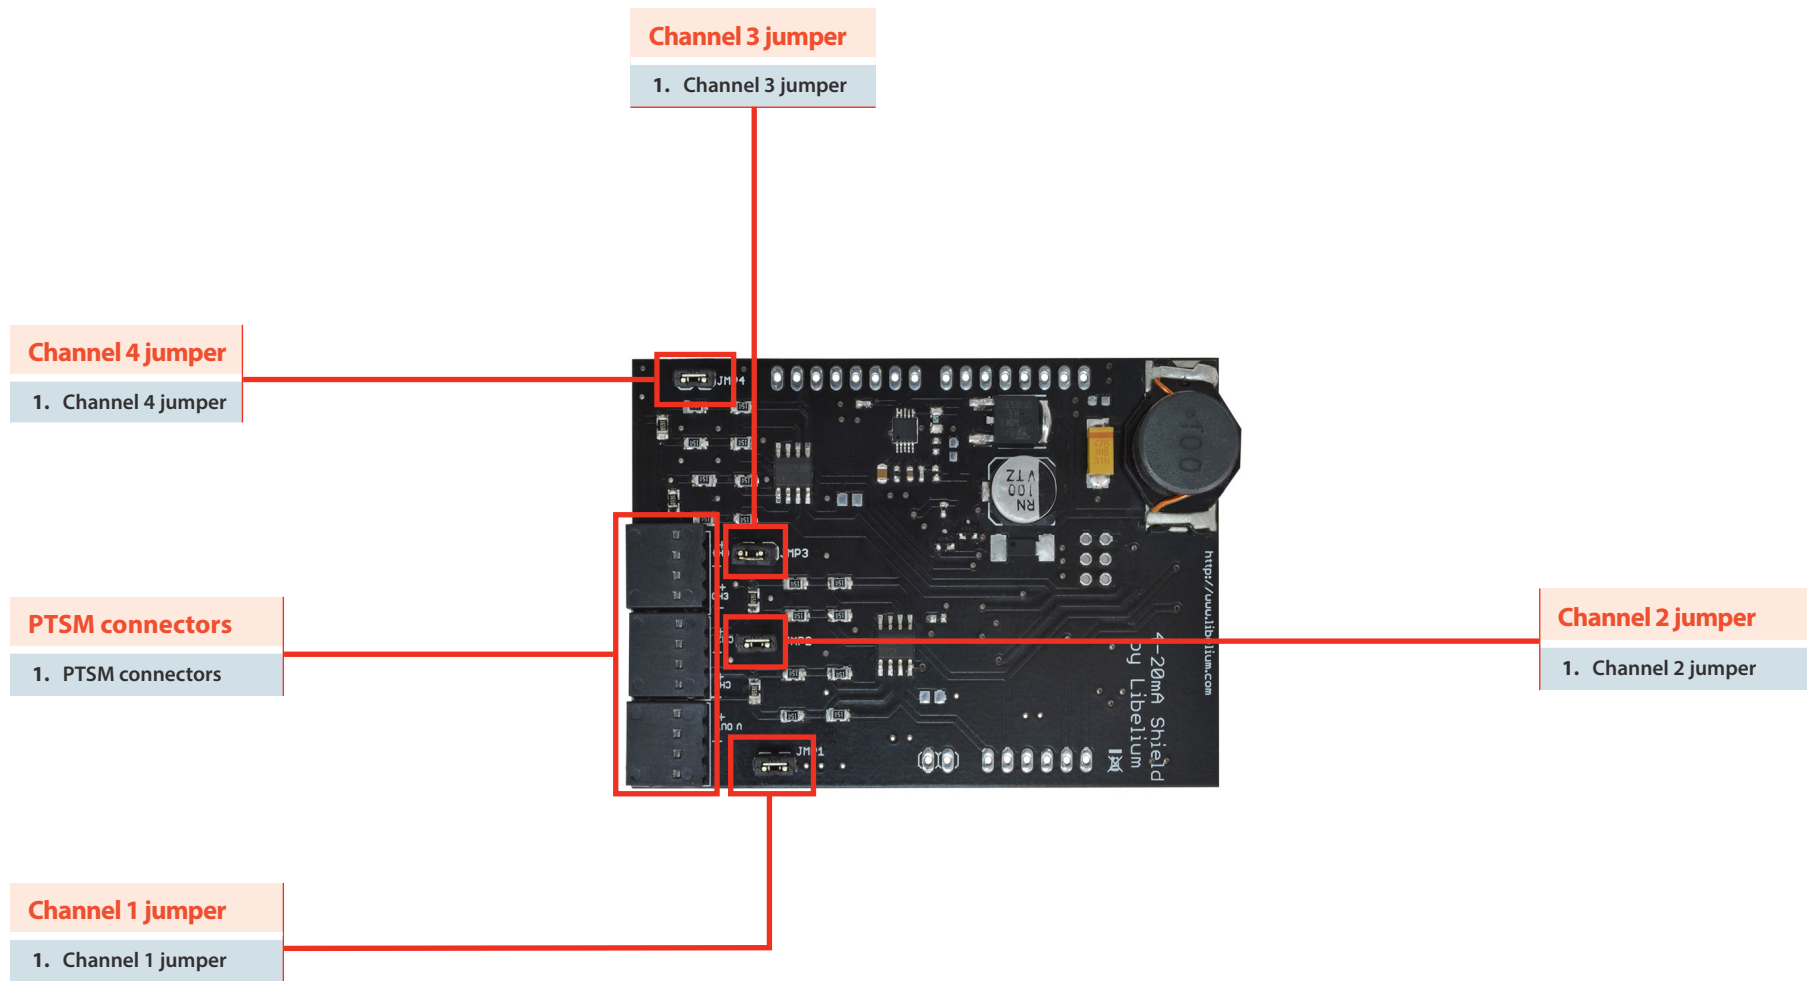

8. Agriculture sensor board / Agriculture PRO sensor board

*** These sensors are only available on the Agriculture PRO sensor board**

Restrictions and special considerations for this board are described below:

- Each sensor has its own socket.
- Only one dendrometer at the same time.
- Wind vane and anemometer go in the same socket
- (1) Up to 3 units on the same board

This sensor board is compatible with a wide variety of 4-20 mA sensors
